

1 **Q1 2016 EARNINGS CONFERENCE CALL**

2 **May 10, 2016**

3

4 **Kathy Guinnesssey**

5

6 Thank you. Good morning everyone, and thank you for joining us today.

7 With me on the call this morning are:

8 Bob Carrigan, our Chief Executive Officer

9 Rich Veldran, our Chief Financial Officer, and

10 Josh Peirez, our President and Chief Operating Officer

11

12 Here's what you can expect on the call today. Following my brief remarks,  
13 Bob will provide an overview of our first quarter results and an update on  
14 our strategy. Then Rich will come on and take you through the highlights of  
15 the quarter. After that we will open the call for your questions.

16

17 To help our analysts and investors understand how we view the business,  
18 our remarks this morning will include forward-looking statements.

19

20 Our Form 10-K and 10-Q filings – as well as the earnings release we  
21 issued yesterday – highlight a number of important risk factors that could  
22 cause our actual results to differ from these forward-looking statements.

1 These documents are available on the Investor Relations section of our  
2 website, and we encourage you to review this material. We undertake no  
3 obligation to update any forward-looking statements.

4

5 From time to time we speak from time to time about deferred revenue. As  
6 a reminder, deferred revenue is a liability that refers to revenue that has not  
7 yet been earned, and represents products or services that are owed to our  
8 customers. As the products or services are delivered over time, it is  
9 recognized as revenue on the income statement. Deferred revenue is  
10 important to management because it provides insight into the health of our  
11 future revenues. When we refer to the change in deferred revenue, we  
12 mean before foreign exchange and acquisitions unless otherwise noted.

13

14 During our call today, we will be discussing a number of non-GAAP  
15 financial measures which we call “as adjusted” results, as that’s how we  
16 manage the business. For example, when we discuss “revenue growth”  
17 we’ll be referring to the non-GAAP measure “revenue growth, as adjusted”  
18 which is revenue adjusted to eliminate the effect on revenue due to  
19 purchase accounting for fair value adjustments to deferred revenue, and  
20 also before the effect of foreign exchange.

21 When we discuss “operating income,” “operating margin” and “EPS,” these  
22 will all be on a non-GAAP basis, which we call “as adjusted”. Additionally,  
23 our “as adjusted” results exclude the results of Discontinued Operations.  
24 When we discuss “free cash flow” this will be on a non-GAAP basis,  
25 excluding the impact of any legacy tax matters, potential regulatory fines

1 associated with the ongoing China investigation and potential payments for  
2 legal and other matters.

3

4 You can find the reconciliation between these and other non-GAAP  
5 financial measures, and the most directly comparable GAAP measures, in  
6 the schedules to our earnings release. They can also be found in a  
7 supplemental reconciliation schedule that we post on the Investor Relations  
8 section of our website.

9

10 We do not provide guidance on a GAAP basis because we are unable to  
11 predict, with reasonable certainty, the future movement of foreign exchange  
12 rates or the future impact of: (i) non-core gains and charges, (ii) acquisition  
13 and divestiture-related expenses; and (iii) purchase accounting fair value  
14 adjustments to deferred revenue. These items are uncertain and will  
15 depend on several factors, including industry conditions, and could be  
16 material to Dun & Bradstreet's results computed in accordance with GAAP.

17

18 Later today, you will find a transcript of our prepared remarks on our  
19 Investor Relations site. With that, I'll now turn the call over to Bob  
20 Carrigan.

21

22

23

24

1 **Bob Carrigan**

2 Good morning everyone, and thank you, Kathy. This morning I'm going to  
3 address our first quarter results and provide an update on our overall  
4 business.

5

6 I'm pleased to report that our first quarter results were a little better than we  
7 expected. On our call in February, we told you that we expected organic  
8 revenue to be slightly down to flat for the quarter due to the timing of  
9 several large contracts that shifted to later in the year. In fact, organic  
10 revenue for the first quarter was flat, which was at the high end of our  
11 expectations, and overall company revenue was up seven percent.

12

13 You might recall that we said that operating income could be down by as  
14 much as the mid-teens as we continue to invest in our strategy. Instead,  
15 operating income came in much better than expected – down four percent.  
16 This improved performance was due to the organic revenue performance  
17 and some costs shifting between the first and second quarters.

18

19 So we feel good about the first quarter, and 2016 is starting out about as  
20 we expected. We are on track to deliver our guidance for the year:

- 21 • Revenue growth between 4 and 6 percent;
- 22 • Operating income between flat and up 4 percent;
- 23 • EPS between -3 and +2 percent; and
- 24 • Free cash flow of \$255 to \$285 million.

With that, I'll give you an update about what's been going on in the business at Dun & Bradstreet.

Last quarter I spoke with you at length about all of the execution changes we undertook toward the end of 2015 and early this year to improve sales performance. Specifically, we elevated Josh Peirez to the role of President and Chief Operating Officer last fall, and we put all customer facing operations under him to unlock the full potential of our multi-channel sales organization. Coming into this year, we changed the compensation structure in our salesforce to incent new business development for every sales rep. We also restructured the organization to reduce friction and to make sure our sales people and alliance partners are all selling the same way, leaving the option of how to buy up to our customers. We made some key personnel changes to upgrade our salesforce, and we made structural changes to remove layers and align incentives to drive new growth.

This represents a lot of change in a short amount of time, and I'm pleased to say that we are starting to see a higher level of cooperation between our Direct, Alliances and Emerging Businesses channels and customers are benefiting from our multi-channel approach to the market.

We are also seeing successes in product areas where we have focused our strategy. Let me talk to you a little bit about a few key areas.

1 Back in January we launched our new cloud-based credit decisioning tool,  
2 D&B Credit, and early reception has been good. We are seeing customers  
3 begin to upgrade to the new platform from DNBi, and we are getting nice  
4 pricing lifts on those conversions. We have also started to bring in new  
5 customers. It is still very early, and as we said on our last call, we don't  
6 expect to see any real movement on the revenue line until late in the year.

7

8 One of the key benefits of launching a cloud-based platform was our ability  
9 to upgrade the product easily. We are adding new functionality and putting  
10 out new releases every few weeks. The other big benefit of the cloud is our  
11 ability to have a truly global platform. D&B Credit is currently available in  
12 the US and Canada, and we are on track to bring it to Europe this summer.

13

14 In other areas of risk management, we saw nice growth in our supplier risk  
15 solutions. Supplier risk is an area where the global reach of our data gives  
16 us a unique advantage in meeting new customer needs. By leveraging our  
17 core capabilities like linkage and identity resolution, we help companies  
18 monitor downstream supplier risk.

19

20 The job of a Chief Procurement Officer is changing significantly. Their  
21 responsibilities were historically focused on optimizing their supplier base,  
22 and we help them monitor financial risk and supplier diversity.

23

1 We provide a deeper understanding of who their suppliers are, and give  
2 them negotiating leverage. And we help manage the multiple layers of their  
3 supply chain to identify concentration risk.

4

5 But the CPO's role has expanded to managing larger strategic risks,  
6 including preventing business interruption and protecting and enhancing  
7 their company's brand and values. Our supply risk solutions help  
8 customers manage this full spectrum of risks. Today, CPOs have a fast  
9 growing need in what we call "Responsible Business Analytics" to help  
10 them guard against regulatory and reputational risks. We help them as  
11 they comply with Government diversity requirements and monitor global  
12 banned entity lists, as well as meeting their social responsibility  
13 commitments like funding suppliers with sustainable business practices and  
14 meeting best in class ethics standards.

15

16 Further, the nature of a globalizing economy has magnified newer risks  
17 throughout the supply process. One area where we have recently focused  
18 is human trafficking. Nearly 21 million people are victims of forced labor  
19 around the world, generating an estimated \$150 billion in illegal profits  
20 every year, according to the International Labour Organization. Millions of  
21 businesses around the world have accepted the responsibility to shine a  
22 bright light on human trafficking and ensure the ethical procurement of  
23 goods and services. But doing this is a challenge.

24

1 To help companies address the risk, we have taken our existing global  
2 proprietary content and leveraged public data from the U.S. State  
3 Department and Labor Department to create an index to assess a  
4 company's risk of being associated with goods and services potentially tied  
5 to human trafficking. Dun & Bradstreet's Human Trafficking Index is an  
6 innovative new use case for our data that fills a need for our customers to  
7 address supply chain risk while also helping them to be responsible  
8 corporate citizens. And it is a great example of how we leverage our  
9 company linkage capabilities through the D-U-N-S Number to create an  
10 integrated view of companies and how they're all connected, which is really  
11 important to understand for a modern procurement manager.

12

13 Now let me shift over to sales and marketing, and, specifically, the digital  
14 advertising market. I've spoken in the past about the trends we are seeing  
15 in this marketplace – where marketers are employing more science than art  
16 to engage with new and existing customers. We are seeing companies  
17 leveraging digital capabilities and data to drive sales and marketing  
18 effectiveness. In fact, the B2B digital ad targeting and real time  
19 personalization market has grown to about \$10 billion. Within this area is  
20 programmatic advertising. Marketers are using data to target their  
21 audience more effectively, and this is a trend that's moving quite  
22 aggressively in the B2B arena.

23

24 Dun & Bradstreet's products in this space – which we call Dun & Bradstreet  
25 Audience Solutions – are really starting to gain traction as global  
26 businesses turn to programmatic advertising to attract new customers.

1 Marketers have long relied on Dun & Bradstreet for the best company data  
2 to manage their customer information and to target prospects. As  
3 marketing moves to digital, marketers need company data optimized for the  
4 digital world. But company data alone is not enough.

5

6 That's because "companies" don't surf the internet, read an email or  
7 answer a sales call; people do. We are working to make sure that our  
8 customers can access data that tells them what companies to target, and,  
9 just as importantly, the right people at those companies to engage with.

10 That's where our professional contact data comes in. Our acquisition of  
11 NetProspex is paying off in this area, allowing us to meet a clear need in  
12 the marketplace. We are working to onboard our data – to move it from  
13 offline sources to online solutions, to deliver our data in new ways to help  
14 our customers identify online target companies most likely to buy their  
15 products and services.

16

17 Our contact data, coupled with our company data, onboarded for the digital  
18 world and matched to online cookies, helps our customers get their  
19 advertising in front of the right target, and the right decision maker at that  
20 target, at the right time. And, by organizing around the D-U-N-S Number,  
21 our customers can finally connect their offline customer management data  
22 with their online advertising campaigns, creating that vital bridge between  
23 ad tech and marketing tech.

24

1 Armed with this complementary company and contact data, we have built  
2 nearly 300 unique audiences, or “segments,” that our customers can use to  
3 target their sales and marketing programs. These segments are built off a  
4 variety of anonymized attributes from basic data, such as company size,  
5 revenue, industry or job function, to more advanced insight such as  
6 propensity to buy certain products, or even viability to qualify for a loan or  
7 company credit card.

8

9 Our multi-channel sales strategy is a real advantage in reaching customers  
10 with Dun & Bradstreet Audience Solutions. Through our alliances channel,  
11 we’ve made our standard customer segments available on the most  
12 popular ad tech and data management platforms from Oracle, Adobe,  
13 Google, Xaxis and Nielsen. Our customers can access the data through  
14 the platforms that they are accustomed to using, without any need for direct  
15 involvement from our sales team. And we also offer our customers the  
16 ability to create bespoke segments through our global direct sales channel  
17 for more specific, customized targeting.

18

19 Our supplier risk and audience targeting solutions are great examples of  
20 our strategy in action. We are taking our crown jewel assets and core  
21 capabilities and bringing new use cases to market to help our customers  
22 deal with new challenges in the rapidly changing global marketplace.

23

24

1 While we are pleased with the traction we are building in these areas, there  
2 are areas where we want to do better. Specifically, our business in Europe  
3 was weaker than expected in the quarter. Over the past few quarters, we  
4 have talked about the positive momentum we are getting in the Compliance  
5 space in Europe, and that continues. Our pipeline is strong and  
6 considerably higher than at this time last year. However, the sales cycle for  
7 Compliance products is proving to be longer than we anticipated.

8

9 In most of these cases, we have essentially sold the product and the  
10 commercial terms; it's the regulatory and legal issues our customers face  
11 internally that is taking the extra time. As you know, the regulatory  
12 environment in financial institutions has become much more complex.  
13 Ultimately, we expect to get these deals closed, as the end user is anxious  
14 to get rolling, but getting through their internal approval process is causing  
15 near-term delay.

16

17 So in summary, when I look at the entirety of our business, we had a good  
18 quarter relative to our expectations, and we're starting the year off on the  
19 right foot. More importantly, I'm pleased with the changes we've made to  
20 our organizational structure and the early traction on innovative new use  
21 cases for our data. The decisions we've made have us on course to deliver  
22 our full year guidance. I will now turn the call over to Rich Veldran, who will  
23 discuss our first quarter results in further detail. Rich?

1 **Rich Veldran**

2 Thanks Bob, and good morning everyone.

3

4 As Bob said, our first quarter results were at the high end of our  
5 expectations. As we said on our last call, we expected first quarter organic  
6 revenue to be flat to slightly down due to the timing of some large  
7 contracts. We delivered flat organic revenue and 7% growth in total  
8 revenue.

9

10 Our Americas segment had revenue of \$310 million, which represented  
11 82% of revenue in the quarter. Total revenue was up 10%, and organic  
12 revenue was up 1%.

13

14 Within the Americas, Risk Management, was up 13% in the first quarter,  
15 due to the inorganic contribution from Credibility Corp. Organic RMS  
16 revenue was down slightly, as strong revenue growth in Other Enterprise  
17 Risk was offset by declines in Trade Credit.

18

19 Other Enterprise Risk grew 77% in the quarter. As a reminder, the  
20 inorganic credit-on-self revenue from Credibility Corp. is in this category.  
21 Organic revenue in Other Enterprise Risk was also strong with growth in  
22 the low teens.

23 The organic performance was driven by supply management solutions and  
24 our data-as-a-service solution D&B Direct for Risk.

20  
21  
22  
23

Trade Credit was down 1% in the quarter. DNBI declined 3%, which was a little worse than last year, although the primary reason for this difference was some shift in customer spending between DNBI and Other Trade Credit solutions. The results in the overall Trade Credit category were consistent with our performance last year.

Sales and Marketing revenue was up 7% in the quarter with more than half of that growth organic. Advanced Marketing Solutions was up 5%, both on an organic and a total basis. As a reminder, we acquired NetProspex in the beginning of January last year, so results are now in the organic base. Revenue from NetProspex, Alliances, and Audience Solutions drove the growth.

Prospecting Solutions grew 13% during the quarter, due to the inorganic contribution from Credibility Corp. Organic revenue in Prospecting was down slightly primarily due to declines in Hoovers and MDR.

Shifting to Non-Americas, revenue was \$68 million in the first quarter, which represented 18% of revenue for the company. Non-Americas revenue declined 5% in the quarter. There were 2 primary reasons for the decline. First, we decided to end our relationship with a competitor in Europe who was buying our data.

1 As we've talked about before, we have some long standing contracts with  
2 companies that have become competitors over time, and we have decided  
3 not to continue to sell data to one of them.

4

5 The second reason for the decline was due to a few large projects that  
6 helped drive growth in the quarter last year that were not repeated this  
7 year. Project revenue can be lumpy and, due to the size of these  
8 contracts, can swing results from quarter to quarter.

9

10 Deferred revenue was up 1% for the company before acquisitions and the  
11 impact of foreign exchange. In the Americas, deferred revenue increased  
12 2%, and that does not include committed sales with our alliances partners  
13 that would have added another point to the balance.

14

15 Turning to profitability, operating income in the quarter was down 4%,  
16 which was better than we expected, due to the organic revenue coming in  
17 at the high end of our expected range and the timing of some spending that  
18 shifted between the first and second quarters.

19

20 EPS declined 9% in the quarter, to \$1.18 per share. EPS was impacted by  
21 lower operating income and higher interest expense, partially offset by a  
22 lower tax rate in the quarter. In 2015, our full year tax rate was 31.7%, and  
23 we expect the rate in 2016 to be about the same.

24

1 We generated free cash flow of \$115 million during the quarter. Free cash  
2 flow was impacted by higher cash restructuring payments during the  
3 quarter related to actions we took in the second half of 2015, as well as  
4 higher interest expense and capex, all of which was factored into our full  
5 year guidance.

6

7 Turning to the balance sheet, we ended the quarter with \$1.7 billion of debt,  
8 including about \$1 billion of fixed rate senior notes, and \$700 million  
9 floating rate debt. Our cash balance was \$366 million, for net debt of  
10 approximately \$1.4 billion.

11

12 So, overall we have started the year pretty much as expected, with some  
13 shifts between first and second quarter operating expenses. As with  
14 previous years, we expect the second half of the year to be stronger than  
15 the first. For the second quarter, we expect the growth rate for organic  
16 revenue and operating income to be about the same as the first quarter,  
17 before a nice acceleration in the second half. And as Bob said, we are on  
18 track to deliver our full year guidance.

19

20 We will now open the call for your questions, Operator?

21
